Notes:

* Unit means:

- *For residential customers:* one room, or rooms connected together, constituting a separate, independent housekeeping establishment for owner occupancy, or rental or lease and physically separated from any other rooms or residential units that may be in the same structure and containing independent plumbing facilities. A residential unit may include, but is not

limited to, a single family house, an apartment unit, condominium unit, mobile home, or a guest house.

- *For commercial customers:* an area constituting a separate, independent enterprise establishment for owner occupancy, or rental or lease and physically separated from any other commercial units that may be in the same structure and containing independent plumbing facilities.
- *For both residential and commercial purposes,* the term unit does not include a motel or hotel unit or similar transient lodging or rest homes, nursing homes or similar institutional facilities.

** Shown on the water meter readings averaged for the months of December, January, and February of the preceding year. If any of those three (3) months were a zero reading, the water consumption for that month will not be used in the average. For example, if one month has a zero read then the two months consumption will be added and then divided by two. In the case where three zero reads were recorded for December, January, and February, then the previous year water usage will be used. In the event that the previous year also had three zero reads, then the wastewater management division director will estimate the average based on water usage history for that particular customer's residence or business. If any of those three months were a reading less than 1000 gallons, the water consumption for that month shall be assumed to be 1,000. For example:

December		5,000g water consumption
January	0g water consumption, so	0 gallons assumed
February	900g water consumption, so	1,000 gallons assumed
Total (for the 3 months)		6,000 gallons water consumption
Average (Divide by two since one zero read)		3,000 gallons

*** Shown on the water meter reading for that utility billing cycle.

12.1. The Surcharge fee shall be equal to:

$0.9 \times (C-D) \times F \times cf \times L$, for users whose discharge has been tested, and

$0.9 \times (M-D) \times F \times cf \times L$, for users whose discharge has not been tested.

Where:

C = COD concentration in the user's discharge stream in milligrams per liter (mg/l)

D = Average domestic sewage COD concentration, established at 550 milligrams per liter (mg/l).

F = Average water use in million gallons per month as shown in the water division records.

cf = 8.34. A factor to convert the units of milligrams to pounds per million gallons.

L = The mass based cost of providing air to remove the COD in wastewater. The cost has been established at the following costs:

Effective Date	Cost per pound
January 1, 2010	\$0.51

M = Mean COD concentration in the user's sewage disposal as tested.

0.9 = Represents ninety percent of the water used through a water meter as being discharged into the sanitary sewer.

Or:

Monthly water usage $\times 0.00337 \times L$ = Amount of monthly surcharge fee.

12.2 The resampling fee shall be equal to: \$75.00 and shall not be sampled more than once per calendar year.
